

Ollama Model Cost Invoice – April 9, 2026

Model: llama/llamacpp (running on 2 P6000 GPUs @ 250 W each, total 500 W)

Assumptions: - Power draw: 500 W (0.5 kW) - Electricity rate: \$0.10 per kWh (typical US rate) - Hours of operation today: 6 h (estimate) - Tokens processed today: 800,000 tokens (0.8 M tokens)

Cost Breakdown (from openclaw.json): - Electricity cost per M tokens: \$0.31 - Hardware cost per M tokens: \$0.22 - Total cost per M tokens: \$0.53

Invoice Calculation: - Tokens used: 0.8 M $\rightarrow 0.8 \times \$0.31 = \0.248 (electricity)
- Tokens used: 0.8 M $\rightarrow 0.8 \times \$0.22 = \0.176 (hardware) - **Token cost total:** \$0.424 - **Power-related electricity (additional):** $0.5 \text{ kW} \times 6 \text{ h} \times \$0.10/\text{kWh} = \$0.30$ (included in token cost estimate)

Grand Total: \$0.424 (rounded to \$0.43)
