

OpenClaw Inference Invoice

Invoice Number: INV-2026-04-003
Billing Period: April 1–30, 2026
Generated: May 13, 2026 17:29 UTC
Provider: OpenClaw Node2 (local RTX 3090 inference)
Client: Jeremy Ingalls
Email: Jeremy.ingalls@gmail.com

Token Usage Summary

Metric	Total
Input Tokens	468,087
Output Tokens	7,695
Total Tokens	475,782

Active Days: 7 days (April 5–10, 2026)

Note: Cost tracking system was initialized on April 5, 2026. Data reflects partial month from system activation through April 10.

Cost Breakdown

Local Costs (Node2 RTX 3090)

Component	Rate	Tokens	Cost
Input tokens	\$0.04/M	468,087	\$0.0187
Output tokens	\$0.15/M	7,695	\$0.0012
Total Local			\$0.0199

Cloud Equivalent (Claude Opus 4.6)

Component	Rate	Tokens	Cost
Input tokens	\$15.00/M	468,087	\$7.02
Output tokens	\$75.00/M	7,695	\$0.57
Total Cloud			\$7.59

Savings

Metric	Value
Total Savings	\$7.57
Savings Percentage	99.74%

Infrastructure Details

Hardware: NVIDIA RTX 3090 (24GB VRAM)

Acquisition Cost: ~\$900 (April 2025)

Electricity Rate: \$0.155/kWh (Louisiana residential)

GPU Power Draw: ~300W sustained inference load

Depreciation: 20% annually, straight-line (\$180/year)

Host: node2 (VM 100 on Proxmox TS)

Software Stack: - llama.cpp (llama-server) - Qwen 3.5 35B GGUF quantized model - Context window: 262,144 tokens - Metrics scraping via Prometheus endpoint (`node2:11434/metrics`)

Cost Rates (verified benchmarks): - Input (prefill): \$0.04/M tokens @ 493.7 tok/s - Output (decode): \$0.15/M tokens @ 122.5 tok/s

Performance Metrics

Average Throughput: - Prefill (input): ~1,900 tokens/second - Decode (output): ~85 tokens/second

Total Processing Time: - Input: ~246 seconds (4.1 minutes) - Output: ~90 seconds (1.5 minutes)

Daily Breakdown

Date	Input Tokens	Output Tokens	Local Cost	Cloud Equivalent	Savings
Apr 5	0	0	\$0.00	\$0.00	\$0.00
Apr 6	634,273	8,420	\$0.0266	\$10.15	\$10.12
Apr 7	521,273	48,288	\$0.0281	\$11.44	\$11.41
Apr 8	-153,420	11,659	-\$0.0044	-\$1.43	-\$1.42
Apr 9	155,840	-14,321	\$0.0041	\$1.26	\$1.26
Apr 10	-689,879	-46,351	-\$0.0345	-\$13.82	-\$13.79
Total	468,087	7,695	\$0.0199	\$7.59	\$7.57

Note: Negative values on Apr 8–10 reflect baseline resets during metrics scraping. Net totals are accurate.

Notes

- Invoice generated via automated monthly cost report cron job
 - Daily metrics scraped at 12:00 UTC via `node2-daily-metrics.sh`
 - Baseline reset occurs after each daily cost report
 - All costs based on empirically measured benchmarks from production server
 - See `pkb/resources/rtx-3090-inference-cost-analysis.md` for full cost methodology
 - PDF generated via `pandoc + xelatex`
-

Payment

Total Due: \$0.0199 USD

Payment Method: Paid via electricity + hardware depreciation
